Education

- 2021 - expected 2023** **MSc. Computer Science** University of Copenhagen
Focus on Programming Languages and Systems
- 2017 - 2021** **BSc. Informatics**
Karlsruher Institut für Technologie *Minor: Mathematics*
- 2008 - 2017** **Abitur (1.5)**
Werner Heisenberg Gymnasium Bad Dürkheim

Work Experience

UCPH: TA for Advanced Computer Systems Course (winter term 2022) Course on fundamental concepts in computer systems, distributed systems and database theory. Being a TA involved giving presentations and grading assignments.

Student worker at Fraunhofer IEE Kassel (July 2021 - June 2022) Creating data pipelines for service data of wind turbines. Designing and implementing a system for OCR-based data extraction from invoices and helping customer to integrate it into their ERP system, cutting initial (manual) processing time per invoice from 15 min to less than 1 min.

Internship at Fraunhofer IEE Kassel (April 2021 - July 2021) Analyzing, automatic processing and labeling of wind turbine maintenance data. Working on Machine Learning models for predictive maintenance. Developing models for anomaly detection for wind turbine status data.

Sparkteams: Backend of time tracking application (July 2019 - April 2020) As a working student developed a prototype to test new technologies, using Kotlin, micro service framework Micronaut, jooq and Postgres. Implemented a feature for forecasting allocation of remaining work hours.

KIT: Tutor for Introductory Lecture to Informatics (winter term 19/20) This involved preparing slides weekly and giving a presentation to a group of 20 students.

Technical Experience

Programming Languages

Python During my bachelor thesis I worked on policy search methods for robotic reinforcement learning. Knowledge of basic data science/ML libraries (pandas, numpy, scikit-learn, matplotlib)

Java Designed and implemented an android todo list app in a group of five. This included a backend written in java to enable sharing todo items.

C++ / CUDA Focus on solving algorithms during practical course for ICPC (programming contest). Developing remote sensing algorithm for GPUs using CUDA in a university course.

C Build and programmed an asuro (small robot) for solving a parkour during an university course, proactive security course doing CTFs

Isabelle (Proof assistant) Developed a constraint-based security protocol analyzer, proving its soundness and completeness.

Misc

Linux Experience Debian 3 year experience, involving basic system administration

Docker basic knowledge, mostly used for deploying python applications

Language Skills

- German first language
- English fluent
- Albanian basic knowledge

Activities

- Member of the students group Students for Children, giving Math tuition to underprivileged children (2018 - 2020)
- Mentor for first year students at KIT (WS 19/20), planning events and doing regular meetups
- Volunteer for Red Cross (2019 - 2020): working with elderly people

About Me

I appreciate upfront communication, clean design, productive engineering tools, formal methods, solid theoretical understanding and rigorous investigations. Besides that I enjoy reading and trying new things. In my free time I try all kinds of sports, currently I am focusing on gymnastics and juggling.
